

UNIVERSITY OF MIAMI
COLLEGE of ENGINEERING

**Internship Programs at the
University of Miami College of Engineering**

Summer internships are very popular with students. Students not attending summer academic session(s) are available for internship opportunities from mid-May until the end of August, allowing a 3-month commitment. To bring the most outstanding candidates, selection of engineering and technical interns usually begins early in the annual recruitment cycle, with many engineering firms initiating and completing the interview and offer process during the fall with the expectation of hiring by the beginning of January for the summer internship program.

On a more limited basis, students participate in internship placement to local (South Florida) corporate and technology firms during the academic year, between August and May. Due to their rigorous academic curriculum, engineering students participating in these programs generally are available for no more than 15-20 hours weekly.

Generally internships programs are on a paid basis, although the salary arrangements are flexible and the experience and introduction to company culture are strong benefits for the students. For an employer the primary benefit is the chance to develop promising engineering and technical talent. Our corporate internship program participants generally work with the expectation they will eventually be able to extend an offer of full time employment, usually upon graduation.

The University of Miami is proud to be a designated recruiting partner to numerous outstanding firms, including GE, Microsoft, FPL, Apple, Johnson & Johnson, the US Air Force, the US Patent and Trade Office and many more.

To facilitate effective recruitment, the College of Engineering Career Services Office and the [Toppel Career Center](#) provide customized support including the twice annual (Fall and Spring) [Career Expo](#), as well as information sessions. Student organizations constantly seek opportunities for professional contacts including tours, speakers and sponsorship of special programming. The Toppel Career Center hosts the Career Expo program, and also supports online resumes, an online job posting service, campus interview support, and numerous programming opportunities
